

The New Standard for Harvest: The CR11 Combine

The rules on combine capacity and productivity have been rewritten.

Building on our nearly 50-year legacy of harvesting innovation — from the creation of Twin Rotor® technology to setting a world record for harvesting — comes the biggest and most productive combine in any field: the all-new New Holland CR11 combine.

We've designed this combine from the ground up with your time and profitability in mind. Built on four pillars — more productivity, maximum grain savings, premium residue management and enhanced uptime — this machine possesses the capabilities needed to address the biggest pain points felt every harvest, while **reducing your total cost of harvesting.**

The CR11 combine is truly in a class of its own

- A 775-horsepower engine, a 75-horsepower increase.
- A 567-bushel grain tank, holding 38% more bushels.
- A 6 bushel per second unload rate that can empty the grain tank completely in 100 seconds.
- 25% fewer drive components and elimination of all drive chains.
- Up to a 60-foot cutting width.
- 2x24-inch rotors.
- A new, larger and fully automated TwinClean double-cleaning shoe with automated cross-distribution control.
- The new IntelliSpread™ system uses radars to detect actual residue spread-width and closed-loop automatic control of the residue system parameters to continuously adjust to changing conditions.
- A new automatic de-slug procedure — leading the market in harvest innovation.
- The first of its kind to come standard with PLM Intelligence™ features built in, the CR11 combine will include the new IntelliView™ 12 display, IntelliSteer™ guidance system and other essential precision farming functions, like telematics and remote screen viewing.

No other combine comes close to matching the combination of performance, size and technology of the CR11 combine. It's unlike any other combine you've seen before. We promise. So, prepare yourself.

The next generation of harvesting is here.
